Art Unit: 2625

1. Please note the Examiner's Amendment in the previous Office action "Notice of Allowability" dated April 25, 2007, and the Examiner's Amendment mailed March 28, 2008 but signed by the examiner July 5, 2007 (and recorded in eDan as "Mail returned to USPTO as undelivered" dated April 7, 2008).

2. The Information Disclosure Statement filed June 30, 2008 and June 21, 2007 after the above mentioned Examiner's Amendment have been considered by the examiner. The IDS filed June 21, 2007 was already considered by the examiner at the time of the Office action having the mailing date March 28, 2008 (sign by the examiner on July 5, 2007) (please refer to the document of April 7, 2007 in eDan). The notice of allowance is still valid after the consideration of the IDS and the updated search.

3. Applicant's correction of the minor errors in the claims listed in the Examiner's Amendment (signed by the examiner on July 5, 2007), which has the mailing date March 28, 2008 (date and associated document type not shown in eDan) and which is shown in the document of April 7, 2008 in eDan, is appreciated.

4. Claims 1, 3-37, 53, and 54 are allowed. Claims 1, 14, 23, 28, 32, and 53 are independent.

5. The following is an examiner's statement of reasons for allowance:

Claims 1, 3-37, 53, and 54 are allowable over the prior art of record.

Independent claim 1 is allowable because the prior art double-side image scanners do not include the light transparent channel from both the first and second side scanning regions to the image extraction apparatus, in combination with all other limitations of claim 1. The prior art Stoffel (U.S. Patent No. 4,536,077) does not teach the light transparent channel from both the first and second side scanning regions as claimed.

Claims 3-13 depend on claim 1, directly or indirectly.

Independent claim 14 is allowable because the prior art of record does not reach the claimed light transparent channel extending between the first or the second paper-transmission channel and the image extraction apparatus, the image extraction apparatus capable of being driven to adjust a distance between the image extraction apparatus and the first and second paper-transmission channels when the first or second side of the document is to be scanned through the light transparent channel, in combination with other limitations of claim 14.

Claims 15-22 depend on claim 14.

Independent claim 23 is allowable because the prior art of record does not teach a scanning method as claimed. The prior art Stoffel (4,536,077) does not teach scanning an image of the first side by the image extraction apparatus through the light transparent channel and scanning an image of the second side by the image extraction

Art Unit: 2625

apparatus through the light transparent channel, in combination with all other limitations of claim 23. Stoffel discloses two light channels for the two scanning steps for the first side and second side, respectively.

Claims 24-27 depend on claim 23 directly or ~indirectly.

Independent claim 28 is allowable because the prior art of record does not teach a scanning method comprising adjusting a light source emitting light incident onto the first side when the first side is to be scanned for an image of the first side, transmitting the document through a paper-turning region and turning the document with a second side of the document facing the image extraction apparatus, and adjusting the light source emitting light incident onto the second side when the second side is to be scanned for an image of the second side, in combination with the other limitations of claim 28.

Claims 29-31 and 37 depend on claim 28.

Independent claim 32 is allowable because the prior art of record does not teach a scanning method comprising adjusting a distance between the image extraction apparatus and the first side of the document when the first side is to be scanned for an image of the first side, transmitting the document through a paper-turning region and turning the document with a second side of the document facing the image extraction

Art Unit: 2625

apparatus, and adjusting a distance between the image extraction apparatus and the second side of the document when the second side is to be scanned for an image of the second side, in combination with the other limitations of claim 32.

Claims 33-36 depend on claim 32, directly or indirectly.

Independent claim 53 is allowable because the prior art of record does not teach an apparatus as claimed, comprising the image extraction apparatus capable of extracting images of the first and seconds of the document through the first- and second-side scanning regions, respectively, of the paper-feeding through-channel defined in claim 53, the image extraction apparatus comprising a light source capable of being adjusted according to images of the first and second sides of the document, in combination with other limitations of claim 53.

Claim 54 depends on claim 53.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 2625
